

Treatment costs

WELCOME TO REPROMED

We know that every client is unique – from a different background, at a different life stage, with different needs. That's why we believe in highly personalised care and we are passionate about finding the best solution that meets your individual needs. We value gender diversity and are proud to be Aotearoa New Zealand's first healthcare provider to receive the Rainbow Tick.

By choosing your care with us, you can take comfort you'll receive the best possible fertility treatment, with access to the following:

- Professional expertise and service that meets the highest level of independent global and national quality standards.
- World-class technology and equipment.
- Treatments and support for any age, from late teens onwards.
- Compassion on your fertility journey.
- Continuity of care – you'll likely have the same nursing team and doctor.
- Clear communication every step of the way.

THE COST OF YOUR FERTILITY TREATMENT

The cost of your fertility treatment will be discussed once your doctor has created your personalised treatment plan.

It usually follows these steps:

- 1 Initial consultation** to understand your individual situation with a fertility doctor.
- 2 Investigations** including but not limited to blood tests, semen analysis and imaging.
- 3 Treatment plan** discussed with your doctor – this is based on the results of your tests.
- 4 Your treatment plan costs** will be explained by the nursing team.

We are here to help you understand your personalised treatment costs.

Please phone 0800 483 105 with any queries.

Consent: You are required to complete and return your consent forms to the Nurses by Day 2 of your treatment cycle.

Invoice: You will be invoiced on Day 2 of your treatment cycle.

Payment: You are required to pay your invoice in full by Day 6 of your treatment cycle. For all other invoices, these need to be paid in full within 7 days. If payment is not received by this deadline, treatment may not go ahead. Payment can be made by cash, direct debit, credit card or online banking. Please note that a 2% surcharge applies to credit card and contactless payments. Our account details are BNZ (02-0192-0563763-000). Please reference your invoice number and full name. You can also pay via credit card or over the phone.

Fertility treatment costs

Fertility treatments are personalised to suit each client's individual needs. The costs outlined are a guide only.

For details of all these treatment options, you'll find a comprehensive overview in the Journey Planner provided to you with your treatment plan (also available here). Prices are reviewed annually on 1st April but can be subject to change without notice.

Please note that medication costs are priced separately from treatment costs. This is because everyone has a unique requirement based on many factors and ensures you don't pay for more than you need. Once medication has left Repromed, we cannot take it back or provide a refund.

A. CONSULTATIONS

You'll initially meet with your Repromed fertility doctor, who will discuss your recommended treatment plan based on your individual situation and will explain which further consultations may be necessary.

This needs to be paid for in full prior to you starting your treatment cycle.

Initial doctor consultation (40 minutes)	\$375
Short follow-up doctor consultation (this is to discuss results or questions from the initial consultation and is limited to 10 minutes)	\$160
Follow-up doctor consultation	\$250
Counselling consultation (when not included in a treatment cycle)	\$215
Initial genetic counselling	\$300
Initial genetic counselling with test ordered	\$415
Genetic counselling – follow up consultation	\$245
Initial dietitian consultation - Individual (70 minutes)	\$220
Follow up dietitian consultation (30–60 minutes)	\$120–\$180
Initial dietitian consultation - Couples (90 minutes)	\$300
Non-attendance fee without notice (please note we require 24 hours' notice for any appointment changes or cancellations)	\$150

B. INVESTIGATIONS

This needs to be paid for in full on the day of your investigation.

Before you begin treatment, there may be several investigative tests that need to be carried out.

These may include the following:

Pre-treatment pipelle biopsy	\$340
Genetic carrier screening via Victorian Clinical Genetics Services (VCGS) in Australia	
Prepair 3: Cystic Fibrosis, Fragile X Syndrome and Spinal Muscular Atrophy	\$680
Prepair 1000+: Female Recipient Screening (female only)	\$1380
Prepair 1000+: Reproductive Couple Report (both female and male)	\$2390

Sperm-related tests and procedures

Surgical sperm recovery (TESA)	\$1,870
Micro TESE	Individualized costing required upon request
Vasectomy reversal	Individualized costing required upon request
Semen analysis incl. a MAR anti-sperm antibody test and strict morphology assessment if required	\$285
Trial sperm wash	\$355
Sperm freezing (includes semen analysis and 1 year storage)	\$345
DNA fragmentation screening, excluding semen analysis	\$415
DNA fragmentation screening, including semen analysis	\$455

Egg-related tests

Anti-Mullerian Hormone (AMH) blood test (pay lab directly)	Lab cost
--	----------

C. TRACKED CYCLE AND OVULATION INDUCTION

Your treatment cycle needs to be paid in full by day 6 of your cycle. If payment is not received by this deadline, treatment may not go ahead.

Often the starting point of your fertility journey will be to track (monitor) your cycle with blood tests and scan to indicate when your most fertile time for intercourse. Additionally, it may sometimes be necessary to stimulate the ovaries with oral tablets to produce one or more follicles for ovulation to occur which is called Ovulation Induction. You can refer to our OI, IUI Journey Planner for more details.

Please note there are no refunds available for the cycles listed below if discontinued.

Ovulation Induction (OI) with oral medication

- Ovaries stimulated with Letrozole or Clomiphene tablets.
 - Monitored with minimal blood tests and scan.
(If you have an external or out of town scan, this is not included in the Repromed treatment costs and you will be charged by the provider directly).
- \$575

Ovulation Induction (OI) with injectable medication

- Ovaries stimulated with injectable FSH (follicle stimulating hormones also known as Gonadotropins).
 - Monitored with minimal blood tests and scan.
(If you have an external or out of town scan, this is not included in the Repromed treatment costs and you will be charged by the provider directly).
- \$2,075

Tracked cycle

- Monitored with several blood tests and up to two scans.
- \$615

D. INTRAUTERINE INSEMINATION (IUI) USING PARTNERS SPERM

Your treatment cycle needs to be paid in full by day 6 of your cycle. If payment is not received by this deadline, treatment may not go ahead.

IUI is essentially a tracked cycle (outlined above) plus a procedure where washed sperm is placed directly into the uterus at the most fertile time in the cycle. Please see our OI, IUI Journey Planner for more details. Please note there are no refunds available if you choose not to use the trigger injection in your cycle and this is due to the requirement for additional blood tests, scans, and nurse coordination.

Note if IUI with donor sperm is required, please refer to the separate Donor Fee Schedule.

Each cycle includes:

- Ovarian oral stimulation medication if required.
- Monitored cycle with blood test and scan.
- One optional counselling session included for every three cycles. \$2,430
- One post-cycle review with your doctor after three cycles or early pregnancy monitoring up to seven weeks.

IUI refunds

Sometimes things don't go to plan and your IUI treatment may be discontinued. In this event, you may be entitled to a partial refund as outlined below.

If the IUI cycle is:	You'll receive a refund of:
• Cancelled prior to trigger injection	\$1,785
• Cancelled post trigger and prior to sperm preparation.	\$1,585
• Stopped after sperm preparation and before insemination.	\$940

E. IVF TREATMENTS

Your treatment cycle needs to be paid in full by day 6 of your cycle. If payment is not received by this deadline, treatment may not go ahead.

In Vitro Fertilisation (IVF) cycles require the ovaries to be stimulated with injectable medication to produce multiple follicles. The growth of the follicles is monitored with several blood tests and scans and the eggs are collected. The eggs are then inseminated with the sperm in the laboratory to make an embryo.

If successful, the resulting fertilised embryo/s are then transferred back to the uterus or frozen for transfer at a later date. Refer to our IVF Journey Planner for more details. At Repromed we offer different types of IVF cycles, depending on your personal situation, as outlined below.

Please note that the below costs **exclude**:

- Medications approx. \$4,150 - \$6,600. Your doctor will advise the medication required, the costs are outlined in the Medication cost schedule.
- Add-ons: additional recommended treatments section H.
- Donor sperm, eggs or embryo – please see our separate Donor Cost Schedule.
- Additional IVF charge for non-residents \$745

1. IVF cycle

Often called Standard IVF, this cycle is carried out when the sperm quality is normal. \$11,050
The eggs have sperm added to the culture dish and left to fertilise naturally overnight. (+ medications)

This cycle includes:

- Monitoring with blood tests and scans.
- Embryo culture.
- A fresh embryo transfer including Embryo Glue®, (see note on Freeze Only Cycle below).
- Embryo freezing and storage for 12 months (where applicable).
- One post-cycle review with your doctor or early pregnancy monitoring up until seven weeks.
- Two optional counselling sessions.

Please note that if payment is not received by the deadline, treatment may not go ahead.

Freeze only cycle

Approximately a third of people undergoing IVF are recommended against having a fresh transfer during the same IVF cycle. This is to reduce the risk of potential health concerns or optimise the chance of success. In these cases all embryos that develop to the Day 5 or 6 stage and fit the selection criteria will be frozen and stored for use in a subsequent cycle (see cost above). The costs of this subsequent thaw cycle is outlined below in the Frozen Embryo Transfer (FET) section F.

2. IVF cycle + sperm microinjection (ICSI)

The addition of sperm microinjection also known as ICSI (Intra-cytoplasmic Sperm Injection) is required when the sperm quality is below the standard required for standard IVF. Eggs are prepared by the embryologists and then injected with a single sperm.

\$14,060

This cycle includes:

(+ medications)

- All the aspects of a standard IVF cycle, as outlined above (section E.1.).
- Plus ICSI procedure (which is additional \$3,010 vs standard IVF cycle).

Please note that if payment is not received by the deadline, treatment may not go ahead.

Cycle refunds

Sometimes things don't go to plan and your treatment cycle may not proceed for a variety of reasons. In the event of a discontinued cycle you may be entitled to a partial refund as outlined below.

If the IVF cycle:	You'll receive a refund of:
• Is stopped before first blood test.	\$10,510
• Is stopped before egg collection.	\$9,640
• Has no eggs at egg collection.	\$3,395
• Has no fertilisation the day after egg collection.	\$2,595
• Has no embryos transferred or frozen (excludes PGT-A cycles).	\$1,245
• Results in a Freeze Only Cycle* where all high-quality embryos are frozen (excludes PGT-A cycles).	\$1,030

3. IVF cycle + PGT-A genetic testing (EmbryoSelect)

Pre-implantation Genetic Testing for Aneuploidies (also known as PGT-A, PGS or EmbryoSelect), is available for those that want to know which of their embryos have a normal number of chromosomes. The cycle involves screening embryos for chromosomal defects during an IVF or ICSI cycle and embryos with the correct number of chromosomes can then be selected for transfer. Additional costs for the genetic analysis is based on the number of embryos tested. There is no fresh transfer in these cycles and embryos are transferred in an FET cycle (see below cost in section F).

\$11,050
(+ medications
+ genetic testing
+ frozen embryo
transfer)

This involves an IVF cycle (or IVF + ICSI cycle if required) as above, and includes:

- Monitoring with blood tests and scans.
- Embryo culture.
- One post-cycle review with the result of biopsy or early pregnancy monitoring up to seven weeks.
- Embryo freezing and storage for 12 months (where applicable).
- Two optional counselling sessions.
- One genetic counselling post biopsy results (if recommended by your doctor).

Please note that if payment is not received by the deadline, treatment may not go ahead.

Unfortunately, due to the significant laboratory preparation costs and administration time, we are not able to offer refunds if the biopsy doesn't go ahead on this cycle.

Genetic testing costs

You will be advised which of the following costs will be relevant to you.

i) PGT-A	Per embryo testing:
• Genetic analysis per embryo (this is for the first, second and third only).	\$1,550
• Genetic analysis per fourth embryo and anymore onwards.	\$1,245
• Public cycle admin fee (non-refundable).	\$1,155
• Embryo thawing and refreezing if required (per batch).	\$1,855
ii) For known genetic defects:	
The costs for each of these analyses vary depending on the complexity of the genetic condition. Note that some clients who are at high risk of having an affected child, may be eligible for public funding.	
• PGT-M (mono-allelic single gene disorders).	Individualised costing required upon request
• PGT- SR (chromosomal structural rearrangements).	
• PGT-HLA (Human Leukocyte Antigen).	

4. Embryo thaw and culture to day 5 or 6 (with/without embryo transfer)

When ready, there are costs associated to transfer the egg/embryo into the uterus.	\$4,400 (+ medications)
Cycle includes:	
• Monitoring with blood tests and scan (if having an embryo transfer).	\$1,830 (without embryo transfer)
• Egg thaw.	
• Embryo culture.	
• Transfer of embryo including Embryo Glue®.	
• Refreeze of any surplus embryos (if applicable) and for one year of storage .	
• One counselling session recommended.	
• One post cycle review with doctor.	

Please note that if payment is not received by the deadline, treatment may not go ahead.

F. FROZEN EMBRYO TRANSFER (FET) CYCLE

Your treatment cycle needs to be paid for in full by day 6 of your cycle.	\$2,795
If payment is not received by this deadline, treatment may not go ahead.	(+ medications)

An embryo that was frozen from an IVF cycle is thawed* and is transferred back to the uterus. This is carried out either a natural monitored cycle or a manufactured cycle (induced with medication).

Cycle includes:	
• Monitoring with blood tests and scan.	
• Embryo thaw and embryo transfer including Embryo Glue®.	
• Two optional counselling sessions.	
• One post-cycle review with your doctor or early pregnancy monitoring up to seven weeks.	

FET refunds

Sometimes things don't go to plan and your FET treatment may be discontinued. In this event, you may be entitled to a partial refund as outlined below.

If the FET cycle:	You'll receive a refund of:
• Is stopped prior to embryo thaw	\$2,335
• Results in no embryo survival post thaw* with no transfer	\$1,345

*Note that less than approximately 5% of embryos do not survive the thaw process.

G. ELECTIVE EGG FREEZING

Your treatment cycle needs to be paid for in full by day 6 of your cycle.
If payment is not received by this deadline, treatment may not go ahead.

Egg freezing provides options for preserving fertility whether for medical or elective reasons. There are two parts to egg freezing – the egg collection and then future thawing, insemination and embryo transfer to the uterus. Egg freezing cycle costs are inclusive of medication.

Please note that the below costs **exclude**:

- Add-ons: additional recommended treatments section I.
- Donor sperm – please see our separate Donor Fee Schedule.

1: Egg collection and freezing

This cycle involves stimulating your ovaries to produce many follicles that are monitored for growth through blood tests and scans. The eggs are collected following the egg collection process for IVF treatment. All mature eggs are frozen and securely stored for up to 10 years in one of the clinic's liquid nitrogen tanks. When ready, the eggs are thawed and fertilised (see the Part 2 costs associated for the IVF cycle required below).

Cycles include:

- Medications.
- Monitoring with blood tests and scans.
- Egg collection.
- Egg freezing and 12 months storage.
- One recommended counselling session.
- One post cycle review.

Options:

More than one egg collection cycle may be required to provide enough eggs for a high chance of future pregnancy.

1. First cycle (inclusive of medication)	\$13,560
2. Second cycle (within three months of the first cycle, inclusive of medication)	\$10,660
3. Third cycle (within three months of the second cycle, inclusive of medication)	\$9,315

Egg freezing refunds

Sometimes things don't go to plan and your Egg Freezing treatment may be discontinued. In this event, you may be entitled to a partial refund as outlined below.

If the Egg Freezing cycle:	You'll receive a refund of:		
	1st Cycle	2nd Cycle	3rd Cycle
• Is stopped before starting injection medications or the first blood test	\$12,880	\$10,120	\$ 8,850
• Is stopped at the first scan	\$9,020	\$6,500	\$5,330
• Is stopped before egg collection or second scan	\$6,560	\$4,270	\$3,210
• Results in no eggs at egg collection	\$2,660	\$2,130	\$1,860

2: Future egg thawing, insemination and embryo transfer

When ready, there are costs associated to transfer the egg / embryo into the uterus. \$8,800
(+ medications)

Cycle includes:

- Monitoring with blood tests and scan.
- Egg thaw.
- Insemination using ICSI (microinjection).
- Embryo culture.
- Transfer of embryo (including Embryo Glue®).
- Refreeze of any surplus embryos (if applicable) and for one year of storage.
- One counselling session recommended.
- One post cycle review with doctor.

\$6,180
(without embryo transfer)

Please note that if payment is not received by the deadline, treatment may not go ahead.

H. ADDITIONAL SERVICES

This needs to be paid for in full prior to you starting your treatment cycle. If payment is not received by this deadline, treatment may not go ahead.

General anaesthetic (you will be charged by the external provider directly)	Approx. \$610–\$910
Recurrent pregnancy loss monitoring (weekly blood tests up to 7 weeks, then weekly scans up to 11 weeks). If you have an external or out of town scan, this is not included in the Repromed treatment costs and you will be charged by the provider directly	\$1,390
Early pregnancy monitoring (weekly blood tests up to 7 weeks, then a scan). If you have an external or out of town scan, this is not included in the Repromed treatment costs and you will be charged by the provider directly	\$705
Ultrasound scan (when not part of a treatment cycle). If you have an external or out of town scan, this is not included in the Repromed treatment costs and you will be charged by the provider directly	\$195
Repeat prescription fee (outside of a treatment cycle)	\$70
Courier fee (excludes sperm, eggs, embryos)	\$70

Storage	
Storage for 12 months (sperm, eggs, embryos)	\$420
Storage for 3 years (sperm, eggs, or embryos)	\$1,030
Storage for 6 years (sperm, eggs, or embryos)	\$1,760
Storage for 9 years (sperm, eggs, embryos)	\$2,310
*We do not offer refunds if only partial storage is used.	
Transport	
Coordination fee to transport sperm/eggs or embryos within Auckland (+ courier cost)	\$230
Coordination fee to transport sperm/eggs or embryos within greater NZ (+ courier cost)	\$315
Coordination fee to transport sperm/eggs or embryos outside NZ (+ courier cost)	Individualized costing required upon request
Interpreter fees	
We offer a comprehensive interpreting service to ensure that those clients that are not fluent in English are fully informed and understand the fertility options. If you would like an interpreter for any consultations, please let us know so that we can book one for you.	
Booking fee	\$60
Telephone (approximately, charged in 15 minute intervals)	\$110 - \$285
Face to face per 30 minutes (approximately, charged in 15 minute intervals)	\$295+
Overseas surcharge	
Pacific Fertility Centre overseas patient surcharge (overseas IVF cycles, including first donor egg cycle)	\$2,305
Overseas cycle management fee (FET only - after first cycle)	\$1,925
Overseas clinic patient surcharge (overseas IVF cycles, including first donor egg cycle)	\$2,940

I. ADD-ONS

We offer a range of additional techniques that are optional extras (add-ons) to the core treatment cycle. Our team continuously assesses the scientific merits, safety, value and clinical evidence of the latest medical advances, to ensure clients have access to a comprehensive range of options. It is our policy to recommend add-ons only where a considered benefit to improved chances of pregnancy exist, based on each client's reproductive history and diagnosis.

Endometrial Receptivity Test (ERA via Igenomix) - This includes the ERA test fee, EMMA/ALICE, courier costs, the manufactured tracked cycle and pipelle biopsy	\$3,540
EMMA/ALICE - This includes the EMMA/ALICE, courier costs, the manufactured tracked cycle and pipelle biopsy	\$2,525
Intralipids Infusions	\$1,155

Embryo / Blast Gen media suite	\$695
HCG Infusion	\$550
Artificial oocyte activation	\$445
Sperm stimulant media	\$435
FDA screening - Price TBC at time of booking	Individualised cost required upon request

NOTES ABOUT COSTS

- Prices are in NZ Dollars and include GST.
- The chance of pregnancy is dependent on many factors. There is no refund if you do not become pregnant.
- We accept Gem Visa with an option of spreading your fertility treatment costs across 24 months, interest free. Lending criteria apply, find out more on our website or talk to our reception team.
