

Treatment costs

WELCOME TO REPROD

We know that every client is unique – from a different background, at a different life stage, with different needs. That’s why we believe in highly personalised care, and we are passionate about finding the best solution that meets your individual needs. We value gender diversity and are proud to be Aotearoa New Zealand’s first healthcare provider to receive the Rainbow Tick.

By choosing your care with us, you can take comfort you’ll receive the best possible fertility treatment, with access to the following:

- Professional expertise and service that meets the highest level of independent global and national quality standards.
- World-class technology and equipment.
- Treatments and support for any age, from late teens onwards.
- Compassion on your fertility journey.
- Continuity of care – you’ll likely have the same nursing team and doctor.
- Clear communication every step of the way.

THE COST OF YOUR FERTILITY TREATMENT

The cost of your fertility treatment will be discussed once your doctor has created your personalised treatment plan.

It usually follows these steps:

1. **Initial consultation** to understand your individual situation with a fertility doctor.
2. **Investigations** including but not limited to blood tests, semen analysis and imaging.
3. **Treatment plan** discussed with your doctor – this is based on the results of your tests.
4. **Your treatment plan costs** will be explained by the nursing team.

We are here to help you understand your personalised treatment costs.
Please phone 0800 483 105 with any queries.

Consent: you are required to complete and return your consent forms to the Nurses by Day 2 of your cycle.

Invoice: you will be invoiced on Day 2 of your cycle.

Payment: you are required to pay your invoice in full by Day 6 of your cycle. Payment can be made by cash, direct debit, credit card or online banking. Our account details are ASB 12-3110-0021121-00. Please reference your invoice number and full name. You can also pay via credit card or over the phone.

Prices may be subject to change without further notice. Please make sure you’re referring to the current version of costs, prices are reviewed annually on 1st April. Our Costs page on our website will always have the current version.

Fertility treatment costs

Fertility treatments are personalised to suit each client’s individual needs. The costs outlined are a guide only.

For details of all these treatment options, you’ll find a comprehensive overview in the Journey Planner provided to you with your treatment plan (also available here). Please make sure you’re referring to the current version of costs (on our website). Prices are reviewed annually but can be subject to change without notice.

Please note that medication costs are priced separately from treatment costs. This is because everyone has a unique requirement based on many factors and ensures you don’t pay for more than you need. Once medication has left Repromed, we cannot take it back or provide a refund.

A. CONSULTATIONS

This needs to be paid for on the day of the appointment.

You’ll initially meet with your Repromed fertility doctor, who will discuss your recommended treatment plan based on your individual situation and will explain which further consultations may be necessary.

Initial doctor consultation (40 minutes)	\$345
Short follow-up doctor consultation (This is to discuss results or questions from the initial consultation and is limited to 10 minutes)	\$145
Follow-up doctor consultation	\$230
Counselling consultation (when not included in a treatment cycle)	\$200
Initial genetic counselling	\$280
Initial genetic counselling with test ordered	\$385
Genetic counselling – follow up consultation	\$225
Initial dietitian consultation (60-90 minutes)	\$220
Follow up dietitian consultation (30–60 minutes)	\$110–\$160
Couples’ dietitian consultation (90 minutes)	\$270
Non-attendance fee without notice (please note we require 24 hours’ notice for any appointment changes or cancellations)	\$140

B. INVESTIGATIONS

This needs to be paid for on the day of your investigation.

Before you begin treatment, there may be several investigative tests that need to be carried out. These may include the following:

Genetic carrier screening via Victorian Clinical Genetics Services (VCGS) in Australia. Testing for: Cystic Fibrosis, Fragile X Syndrome and Spinal Muscular Atrophy	\$625
Pre-treatment pipelle biopsy	\$315

Sperm-related tests and procedures

Surgical sperm recovery (TESE)	\$1,720
Micro TESE	Individualised cost required upon request
Vasectomy reversal	Individualised cost required upon request
Semen analysis including a MAR anti-sperm antibody test and strict morphology assessment if required	\$260
Trial sperm wash	\$330

Sperm freezing (includes semen analysis and 1 year storage)	\$320
DNA fragmentation screening, excluding semen analysis	\$380
DNA fragmentation screening, including semen analysis	\$420

Egg related tests

Anti-Mullerian Hormone (AMH) blood test (pay lab directly)	Lab cost
--	----------

C. TRACKED CYCLE AND OVULATION INDUCTION

OI

Your treatment cycle needs to be paid in full by Day 6 of your cycle.

Often the starting point of your fertility journey will be to track (monitor) your cycle with blood tests and scan to indicate when your most fertile time is for intercourse. Additionally, it may sometimes be necessary to stimulate the ovaries with oral tablets to produce one or more follicles for ovulation to occur which is called Ovulation Induction. You can refer to our OI, IUI Journey Planner for more details.

Please note there are no refunds available for the cycles listed below if discontinued.

Ovulation Induction (OI) with oral medication

<ul style="list-style-type: none">Ovaries are stimulated with Letrozole or Clomiphene tablets.Monitored with minimal blood tests and scan.	\$490
---	-------

Ovulation Induction (OI) with injectable medication

<ul style="list-style-type: none">Ovaries stimulated with injectable FSH (follicle stimulating hormones also known as Gonadotropins).Monitored with minimal blood tests and scan.	\$1,910
--	---------

Tracked cycle

<ul style="list-style-type: none">Monitored with several blood tests and up to two scans.	\$565
---	-------

D. INTRAUTERINE INSEMINATION (IUI) USING PARTNERS SPERM

IUI

Your treatment cycle needs to be paid in full by Day 6 of your cycle.

IUI is essentially a tracked cycle (outlined above) plus a procedure where washed sperm is placed directly into the uterus at the most fertile time in the cycle. Please see our OI, IUI Journey Planner for more details. Please note there are no refunds available if you choose not to use the trigger injection in your cycle and this is due to the requirement for additional blood tests, scans, and nurse coordination.

Note if IUI with donor sperm is required, please refer to the separate Donor Fee Schedule.

Each cycle includes:

<ul style="list-style-type: none">Ovarian oral stimulation medication if required.Monitored cycle with blood test and scan.One optional counselling session included for every three cycles.One post-cycle review with your doctor after three cycles or early pregnancy.monitoring up to seven weeks.	\$2,235
--	---------

IUI refunds

Sometimes things don't go to plan and your IUI treatment may be discontinued. In this event, you may be entitled to a partial refund as outlined below.

If the IUI cycle is:	You'll receive a refund of:
<ul style="list-style-type: none">Cancelled prior to trigger injection.	\$1,640
<ul style="list-style-type: none">Cancelled post trigger and prior to sperm preparation.	\$1,455
<ul style="list-style-type: none">Stopped after sperm preparation and before insemination.	\$865

E. IVF TREATMENTS

Your treatment cycle needs to be paid in full by Day 6 of your cycle.

In Vitro Fertilisation (IVF) cycles require the ovaries to be stimulated with injectable medication to produce multiple follicles. The growth of the follicles is monitored with several blood tests and scans and the eggs are collected. The eggs are then inseminated with the sperm in the laboratory to make an embryo. If successful, the resulting fertilised embryo/s are then transferred back to the uterus or frozen for transfer at a later date. Refer to our IVF Journey Planner for more details. At Repromed we offer different types of IVF cycles, depending on your personal situation, as outlined below.

Please note that the below costs **exclude**:

- Medications approx. \$3,815–\$6,040. Your doctor will advise the medication required; the costs are outlined in the Medication cost schedule. \$685
- Add-ons: additional recommended treatments section I.
- Donor sperm, eggs, or embryo – please see our separate Donor Cost Schedule.
- Additional IVF charge for non-residents

1. IVF cycle

Often called Standard IVF, this cycle is carried out when the sperm quality is normal. \$10,175
The eggs have sperm added to the culture dish and left to fertilise naturally overnight. (+ medications)

This cycle includes:

- Monitoring with blood tests and scans.
- Embryo culture.
- A fresh embryo transfer including Embryo Glue®, (see note on Freeze Only Cycle below).
- Embryo freezing and storage for 12 months (where applicable).
- One post-cycle review with your doctor or early pregnancy monitoring for up to seven weeks.
- Two optional counselling sessions.

Cycle refunds	
Sometimes things don't go to plan and your treatment cycle may not proceed for a variety of reasons. In the event of a discontinued cycle, you may be entitled to a partial refund as outlined below.	
If the IVF cycle:	You'll receive a refund of:
Is stopped before first blood test.	\$9,680
Is stopped before egg collection.	\$8,880
Has no eggs at egg collection.	\$3,125
Has no fertilisation the day after egg collection.	\$2,390
Has no embryos transferred or frozen (excludes PGT-A cycles).	\$1,150
Results in a Freeze Only Cycle* where all high-quality embryos are frozen (excludes PGT-A cycles).	\$950

Freeze only cycle.

Approximately a third of people undergoing IVF are recommended against having a fresh transfer during the same IVF cycle. This is to reduce the risk of potential health concerns or optimise the chance of success. In these cases, all embryos that develop to the Day 5 or 6 stage and fit the selection criteria will be frozen and stored for use in a subsequent cycle (see cost above). The costs of this subsequent thaw cycle are outlined below in the Frozen Embryo Transfer (FET) section F.

2. IVF cycle + sperm microinjection (ICSI)

The addition of sperm microinjection also known as ICSI (Intra-cytoplasmic Sperm Injection) is required when the sperm quality is below the standard required for standard IVF. Eggs are prepared w the embryologists and then injected with a single sperm.

- Cycle includes:
- All the aspects of a standard IVF cycle, as outlined above (section E.1.).
 - Plus, ICSI procedure (which is additional \$2,775 vs standard IVF cycle).
- \$12,950
(+ medications)

3. IVF cycle + PGT-A genetic testing

Pre-implantation Genetic Testing for Aneuploidies (also known as PGT-A or PGS), is available for those that want to know which of their embryos have a normal number of chromosomes. The cycle involves screening embryos for chromosomal defects during an IVF or ICSI cycle and embryos with the correct number of chromosomes can then be selected for transfer. Additional costs for the genetic analysis are based on the number of embryos tested. There is no fresh transfer in these cycles and embryos are transferred in an FET cycle (see below cost in section F).

- This involves an IVF cycle (or IVF + ICSI cycle if required) as above, and includes:
- Monitoring with blood tests and scans.
 - Embryo culture.
 - One post-cycle review with the result of biopsy or early pregnancy monitoring up to seven weeks.
 - Embryo freezing and storage for 12 months (where applicable).
 - Two optional counselling sessions.
 - One genetic counselling post biopsy results (if recommended by your doctor).
- \$9,525
(+ medications
+ genetic testing
+ frozen embryo transfer)

Unfortunately, due to the significant laboratory preparation costs and administration time, we are not able to offer refunds if the biopsy doesn't go ahead on this cycle.

Genetic testing costs

You will be advised which of the following costs will be relevant to you.

I. PGT-A	Per embryo testing:
Genetic analysis per embryo (this is for the first, second and third only).	\$1,430
Genetic analysis per fourth embryo and anymore onwards.	\$1,150
Public cycle admin fee (non-refundable).	\$1,065
Embryo thawing and refreezing if required (per batch).	\$1,705
II. For known genetic defects: The costs for each of these analyses vary depending on the complexity of the genetic condition. Note that some clients who are at high risk of having an affected child, may be eligible for public funding.	
PGT-M (mono-allelic single gene disorders).	Individualised cost required upon request
PGT-SR (chromosomal structural rearrangements).	Individualised cost required upon request
PGT-HLA (Human Leukocyte Antigen).	Individualised cost required upon request

4. Embryo thaw and culture to day 5 or 6 (with/without embryo transfer)

When ready, there are costs associated to transfer the egg/embryo into the uterus.

- Cycle includes:
- Monitoring with blood tests and scan (if having an embryo transfer).
 - Egg thaw.
 - Embryo culture.
 - Transfer of embryo including Embryo Glue®.
 - Refreeze of any surplus embryos (if applicable) and for one year of storage.
 - One counselling session recommended.
 - One post cycle review with doctor.
- \$4,050
(+ medications)
\$1,685
(Without embryo transfer)

F. FROZEN EMBRYO TRANSFER (FET) CYCLE

Your treatment cycle needs to be paid in full by Day 6 of your cycle.

An embryo that was frozen from an IVF cycle is thawed* and is transferred back to the uterus. This is carried out either a natural monitored cycle or a manufactured cycle (induced with medication).

Cycle includes:

- Monitoring with blood tests and scan.
- Embryo thaw and embryo transfer including Embryo Glue®. \$2,535
- Two optional counselling sessions. (+ medications)
- One post-cycle review with your doctor or early pregnancy monitoring for up to seven weeks.

FET refunds

Sometimes things don't go to plan and your FET treatment may be discontinued. In this event, you may be entitled to a partial refund as outlined below.

If the FET cycle:	You'll receive a refund of:
• Is stopped prior to embryo thaw	\$2,150
• Results in no embryo survival post thaw* with no transfer	\$1,240

*Note that less than approximately 5% of embryos do not survive the thaw process.

G. ELECTIVE EGG FREEZING

Your treatment cycle needs to be paid in full by Day 6 of your cycle.

Egg freezing provides options for preserving fertility whether for medical or elective reasons. There are two parts to egg freezing – the egg collection and then future thawing, insemination, and embryo transfer to the uterus.

Please note that the below costs **exclude**:

- Medications approx. \$3,815–\$4,905. Your doctor will advise the medication required; the costs are outlined in the Medication cost schedule.
- Add-ons: additional recommended treatments section I.
- Donor sperm – please see our separate Donor Fee Schedule.

1. Egg Collection and Freezing

This cycle involves stimulating your ovaries to produce many follicles that are monitored for growth through blood tests and scans. The eggs are collected following the egg collection process for IVF treatment. All mature eggs are frozen and securely stored for up to 10 years in one of the clinic's liquid nitrogen tanks. When ready, the eggs are thawed and fertilised (see the Part 2 costs associated for the IVF cycle required below).

Cycle includes:

- Monitoring with blood tests and scans.
- Egg collection.
- Egg freezing and 12 months storage.
- One recommended counselling session.
- One post cycle review.

Options:

More than one egg collection cycle may be required to provide enough eggs for a high chance of future pregnancy.

1. First cycle	\$8,000
2. Second cycle (within three months of the first cycle)	\$6,650
3. Third cycle (within three months of the second cycle)	\$5,700

2. Future egg thawing, insemination, and embryo transfer

When ready, there are costs associated to transfer the egg / embryo into the uterus.

Cycle includes:	
• Monitoring with blood tests and scan.	
• Egg thaw.	\$8,055
• Insemination using ICSI (microinjection).	(+ medications)
• Embryo culture.	
• Transfer of embryo (including Embryo Glue®).	\$5,690
• Refreeze of any surplus embryos (if applicable) and for one year of storage.	(Without embryo transfer)
• One counselling session recommended.	
• One post cycle review with doctor.	

H. ADDITIONAL SERVICES

This needs to be paid for at the time of using this service.

General anaesthetic (you will be invoiced by an external company providing this service)	Approx. \$610-\$910
Recurrent pregnancy loss monitoring (up to 12 weeks)	\$1,280
Early pregnancy monitoring	\$650
Ultrasound scan (when not part of a treatment cycle)	\$180
Repeat prescription fee (outside of a treatment cycle)	\$60
Courier fee (excludes sperm, eggs, embryos)	\$60

Storage	
Storage for 12 months (sperm, eggs, or embryos)	\$400
Storage for 3 years (sperm, eggs, or embryos)	\$980
Storage for 6 years (sperm, eggs, or embryos)	\$1,680
Storage for 9 years (sperm, eggs, or embryos)	\$2,200

*We do not offer refunds if only partial storage is used

Transport	
Transport coordination fee (sperm, eggs, or embryos within Auckland (excluding courier cost)	\$210
Transport coordination fee (sperm, eggs, or embryos outside of Auckland within NZ (excluding courier cost)	\$290
Transport coordination fee outside of New Zealand	Individualised cost required upon request

Interpreter fees	
We offer a comprehensive interpreting service to ensure that those clients that are not fluent in English are fully informed and understand their fertility options. If you would like an interpreter, you must inform us so that we can book one for you.	
Booking fee	\$55
Telephone (approximately, charged in 15-minute intervals)	\$80-\$205
Face to face per 30 minutes (approximately, charged in 15-minute intervals at a rate \$84)	\$180+

Overseas Surcharge	
Pacific Fertility Centre overseas patient surcharge (overseas IVF cycles, including first donor egg cycle)	\$2,120
Overseas cycle management fee (FET only - after first cycle)	\$1,775
Overseas clinic patient surcharge (overseas IVF cycles, including first donor egg cycle)	\$2,705

I. ADD-ONS

This needs to be paid for at the time of using this service.

We offer a range of additional techniques that are optional extras (add-ons) to the core treatment cycle. Our team continuously assesses the scientific merits, safety, value, and clinical evidence of the latest medical advances, to ensure clients have access to a comprehensive range of options. It is our policy to recommend add-ons only where a considered benefit to improved chances of pregnancy exists, based on each client’s reproductive history and diagnosis.

Endometrial Receptivity Test (ERA via Igenomix) - This includes the ERA test fee, EMMA/ALICE, courier costs, the manufactured tracked cycle and pipelle biopsy	\$3,260
EMMA/ALICE - This includes the EMMA/ALICE, courier costs, the manufactured tracked cycle and pipelle biopsy	\$2,325
Intralipids Infusions	\$1,065
Embryo / Blast Gen media suite	\$640
HCG Infusion	\$430
Artificial oocyte activation	\$410
Sperm stimulant media	\$400
FDA screening - Price TBC at time of booking	Individualised cost required upon request

NOTES ABOUT COSTS

- Prices are in NZ Dollars and include GST.
- The chance of pregnancy is dependent on many factors. There is no refund if you do not become pregnant.
- We accept Gem Visa with an option of spreading your fertility treatment costs across 24 months, interest free. Lending criteria apply, find out more on our website or talk to our reception team.
